3G Gate Opener

SS1206B-03

Introduction

3G Door Opener is a WCDMA remote access control system which can activate electronic door locks from your mobile phone and the call is free charge. The device recognizes incoming Caller ID and drop the call then activates the on-board relay to open the doors or gates. The users' phone numbers are programmed into the device by SMS or Call. With this system you can authorize up to 1152 mobile phones to open the gate without cost.

This model supports two Relay outputs so you can remote control two individual doors via the command.

SS1206B-03-AH Frequency:850Mhz/1900Mhz

SS1206B-03-EH Frequency:900Mhz/2100Mhz

Features
